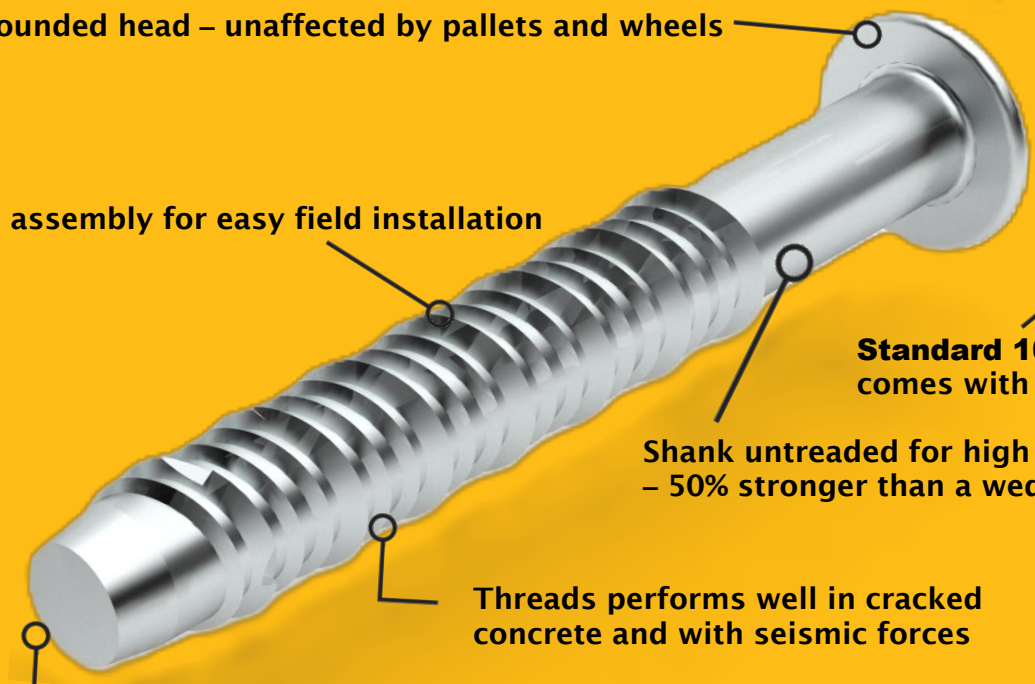
CertiRack® Screw Anchor



CertiRack® Screw Anchor is a patented anchor special **engineered for pallet rack baseplates. It's designed by** engineers with 30 years of experience, and tired of seeing loose and sheared anchors

- Rounded head eliminates damage to lift truck wheels and pallets
- Conventional wedge anchors fail in shear when the rack post is hit – NOT THE CASE with the CertiRack anchor!
- Reliable installation – not sensitive to installation torque
- Easy to install, no preassembly by installers, and easily removed if you move your rack
- The **9/16" diameter shank is incredibly tough, as it doesn't hav** treads to weaken it – NO MORE SHEARED OFF ANCHORS!
- Complies with strength requirements of CSA A23.3 and S16 Annex N and not affected by cracked concrete
